

中国科学院 上海天文台  
Shanghai Astronomical Observatory, CAS

# The recent technology development of Chinese VLBI Network

**ZHENG Weimin**

November 23, 2015, Auckland

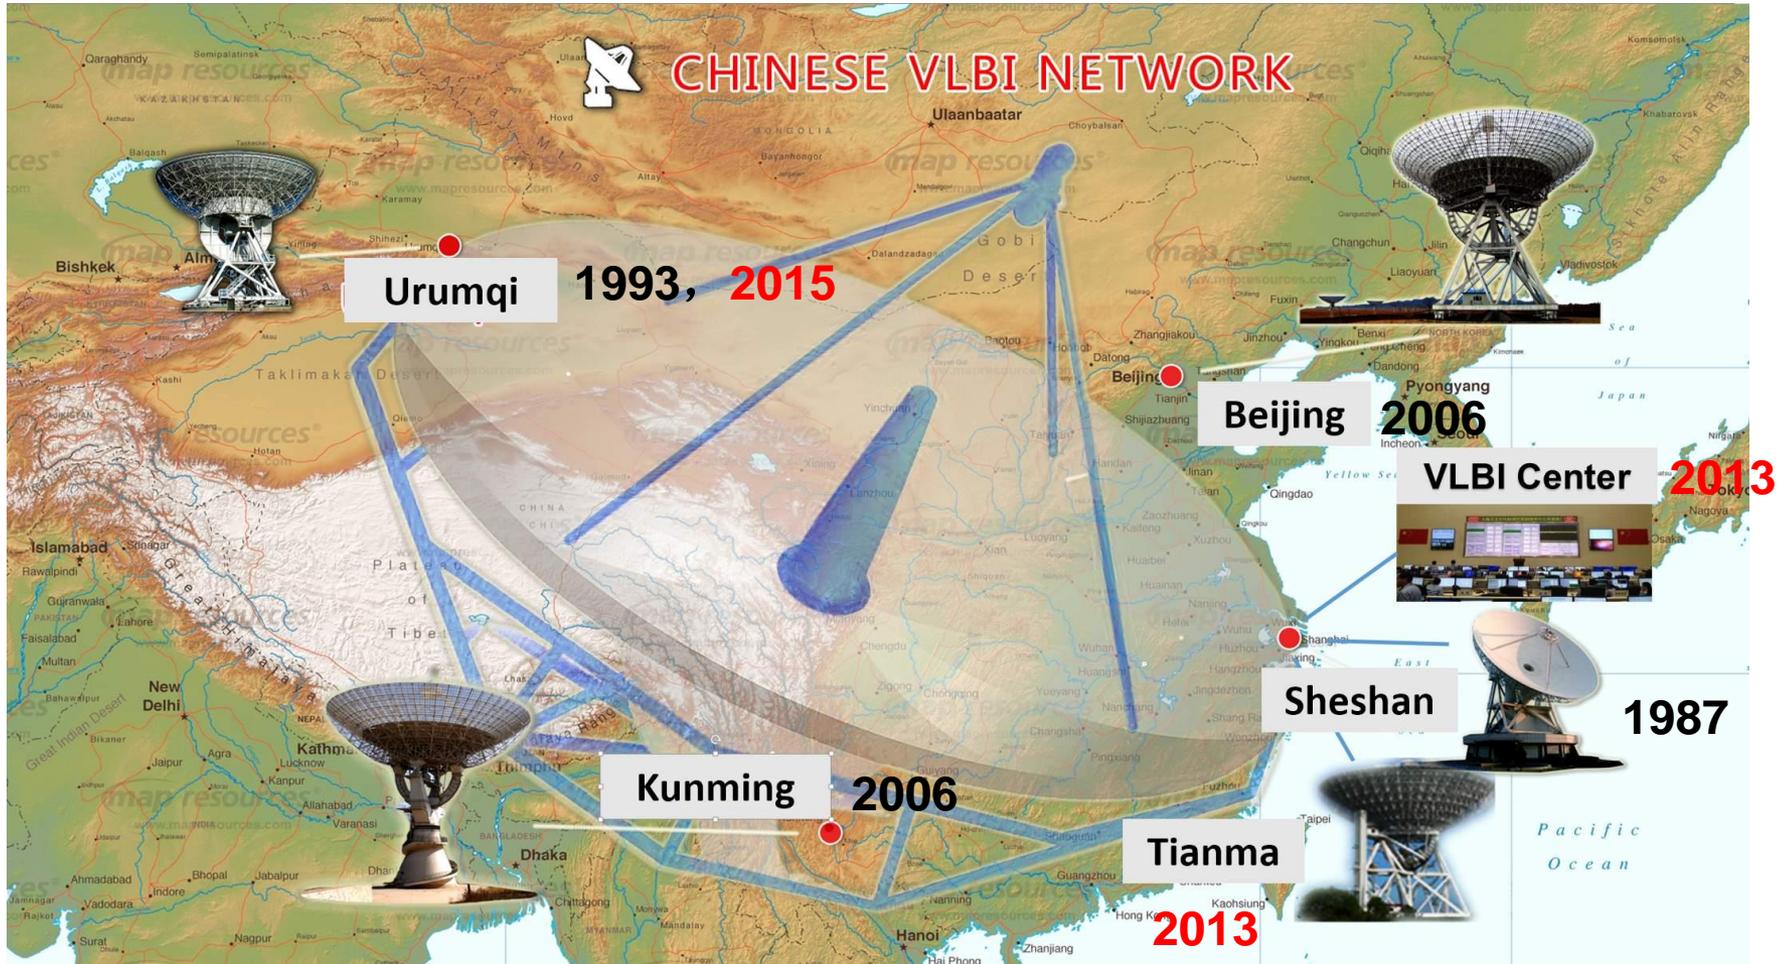

# Outline

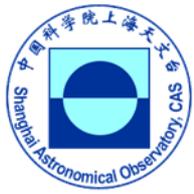

## CVN Overview

- VLBI terminal & Correlator
- Support the lunar missions
- VOGS antenna
- Space Millimeter VLBI Array

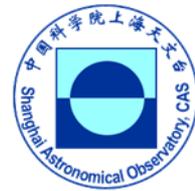

# CVN (5 stations + 1 data center)

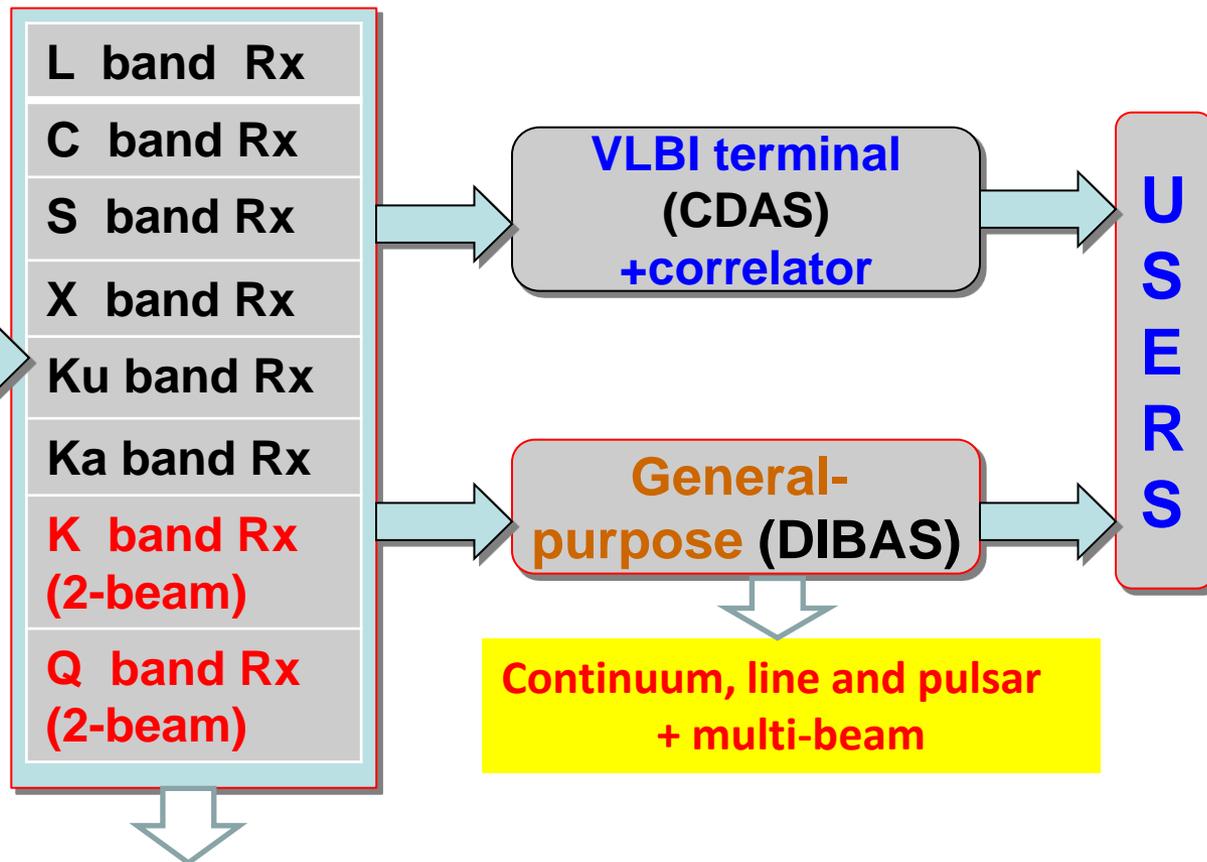

# CVN data center

# Current Status of Tianma Radio telescope

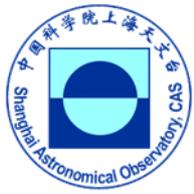

Shanghai 65m RT  
(TianMa Telescope)

**Multi beam system (2-beam at K- and Q-band)**  
**(+ simultaneous observations of multiple lines)**

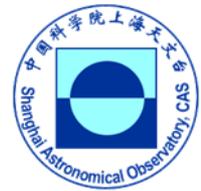

# Open Use of the TianMa Telescope

---

- **As a VLBI station, join world-wide networks:**
  - EVN, IVS, VLBA, EA-VLBI, CVN
- **As a single dish, open to the world**
  - 1<sup>st</sup> "Call for proposal" for pulsar research made on Sept. 15, 2014
    - ✓ 22 proposals received,
    - ✓ PIs from 7 institutes, co-Is from 12 (domestic) + 3 (oversea)
  - 2<sup>nd</sup> "Call for proposal" for spectroscopic observations made on Dec. 29, 2014
    - ✓ 16 proposals received,
    - ✓ PIs from 5 institutes, co-Is from 8(domestic) + 2 (oversea)
  - Goal is to operate TM with an open access driven by scientific merit!

# Receiver Frequency Range & Performance

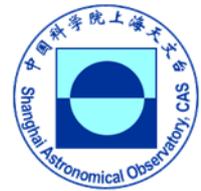

Bands	L	S	C	X	Ku	K	Ka	Q
Wavelength $\lambda$ (cm)	21/18	13	6/4.5	3.6	2.5/2.0	1.35	0.9	0.7
Frequency f (GHz)	1.25- 1.75	2.2- 2.4	4.0- 8.0	8.2- 9.0	12.0- 18.0	18.0- 26.5	30.0- 34.0	35.0- 50.0
FWHM ( " @CF, $1.02\lambda/D$ )	628	410	157	110	69	43	29	22
Efficiency $\eta_A$ ( %, best elev=50° )	55	60	60	55	40	$\geq 20$ ( $\geq 55^*$ )	$\geq 50^*$	$\geq 45^*$
Tsky (K)	12	12	10	10	12	25	13	26
Trec (K)	14	21	12	22	15	21	25	40
Tsys (K)	26	33	22	32	27	46	38	66
SEFD (Jy, Tsys/DPFU)	39	46	31	48	56	192 (70*)	63*	122*
Thermal noise (mJy, $1\sigma$ ( $B_w=128\text{MHz}$ , $T_{\text{on}}=10$ min) )	0.142	0.165	0.110	0.175	0.202			

$$\text{SEFD} = \frac{2kT_s}{A_e} = \frac{2kT_s}{\eta_A A_g} = \frac{8kT_s}{\eta_A \pi D^2}$$

$$\sigma = \frac{\text{SEFD}}{\sqrt{T_{\text{on}} B_w}}$$

Opportunity for mJy science observation!

# SEFD comparison of TM with some others

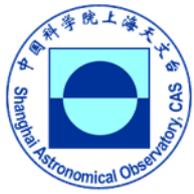

$$SEFD = \frac{2k_B T_{sys}}{A_e}$$

	<b>GBT 100m</b>	<b>Effelsberg 100m</b>	<b>Parkes 64m</b>	<b>Lovell 76m</b>	<b>Tian Ma 65m</b>
L band	1.15-1.73	1.27-1.45, 1.59-1.73	1.2-1.8	1.25-1.50, 1.55-1.73	1.25-1.75

# Receiver Laboratory

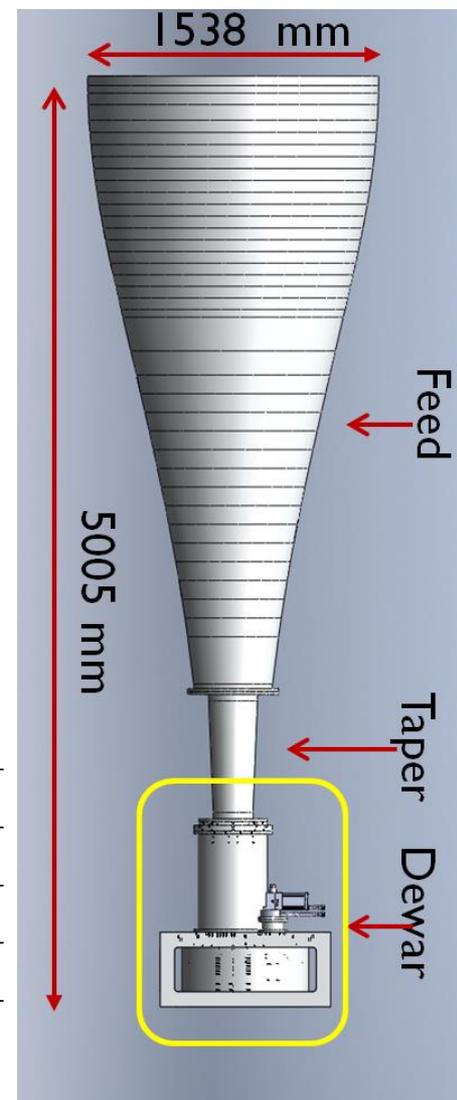

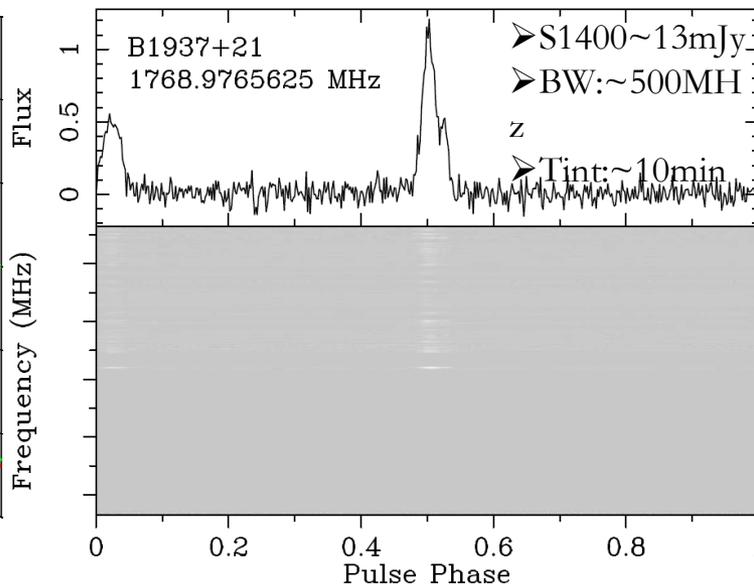

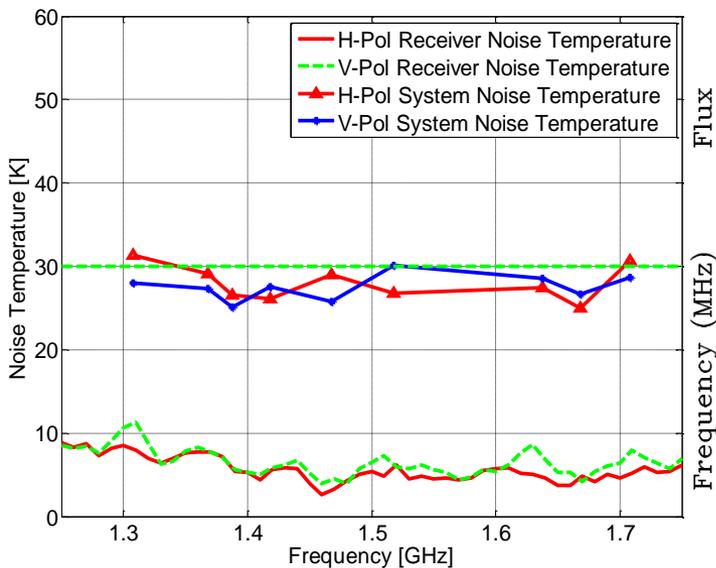

Far field range 1-50 GHz  
Chamber size 10.9 m\*5.8 m\*5.8 m  
Quiet zone 1.5m\*1.5m

# L-band receiver

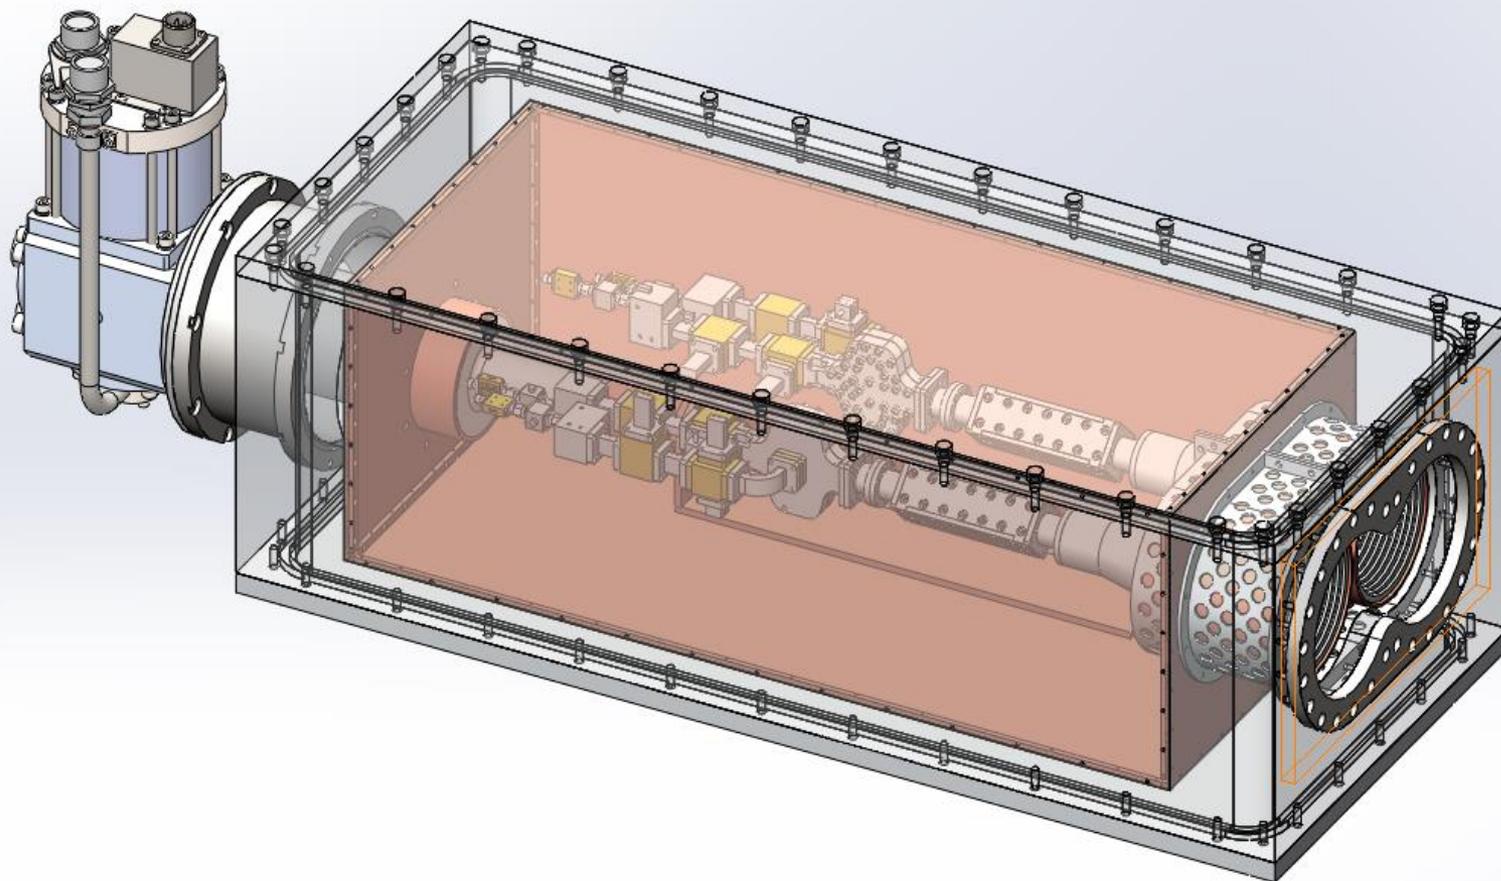

## Features

- 500 MHz BW, 18 & 21 cm observation
- Cooled OMT & hybrid LNA
- $\Phi 270$  mm microwave & vacuum window

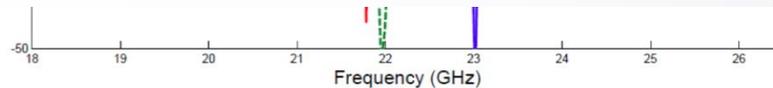

# K-band receiver

Maximum 110mm beam offset

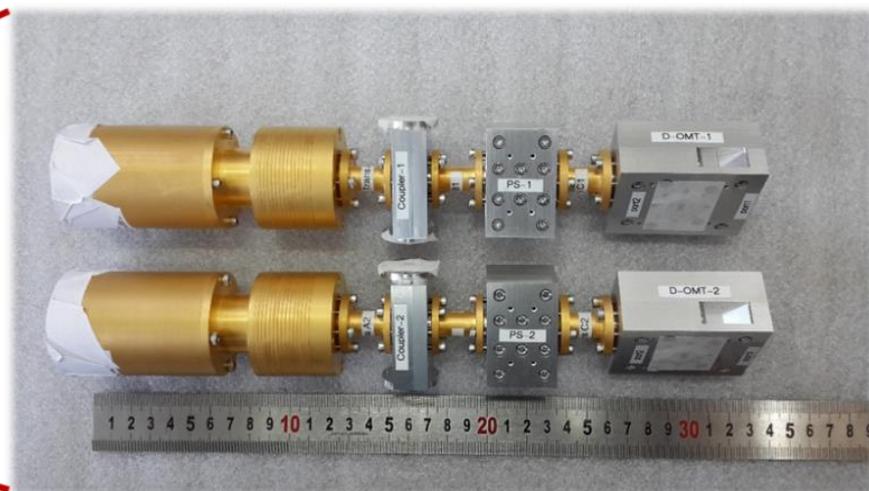

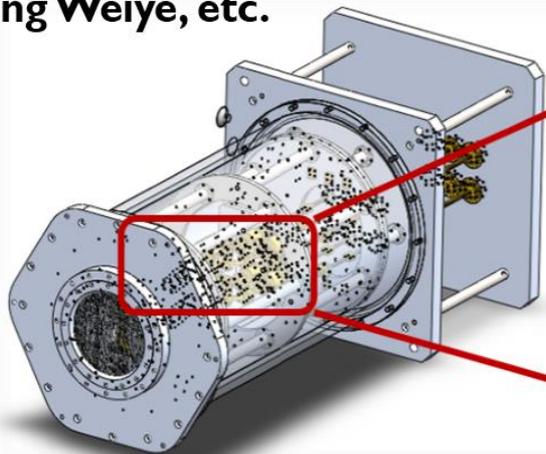

Transducer

# Q-band receiver

Zhong Weiye, etc.

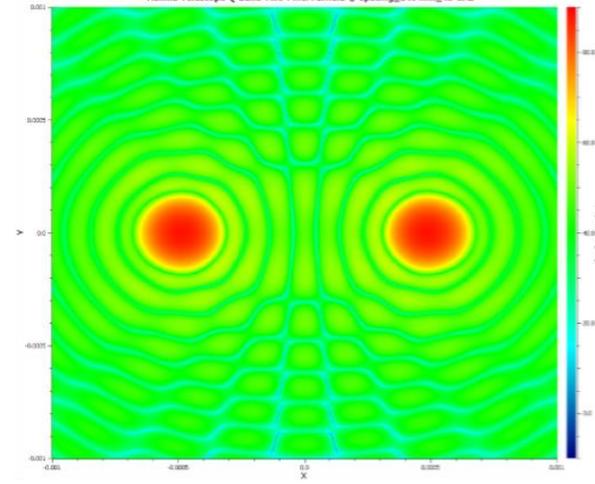

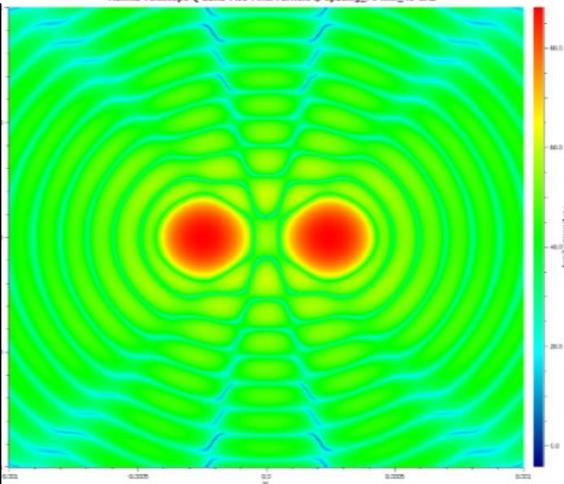

Tianma Telescope Q-Band Single-Pixel Farfield @ 43 GHz

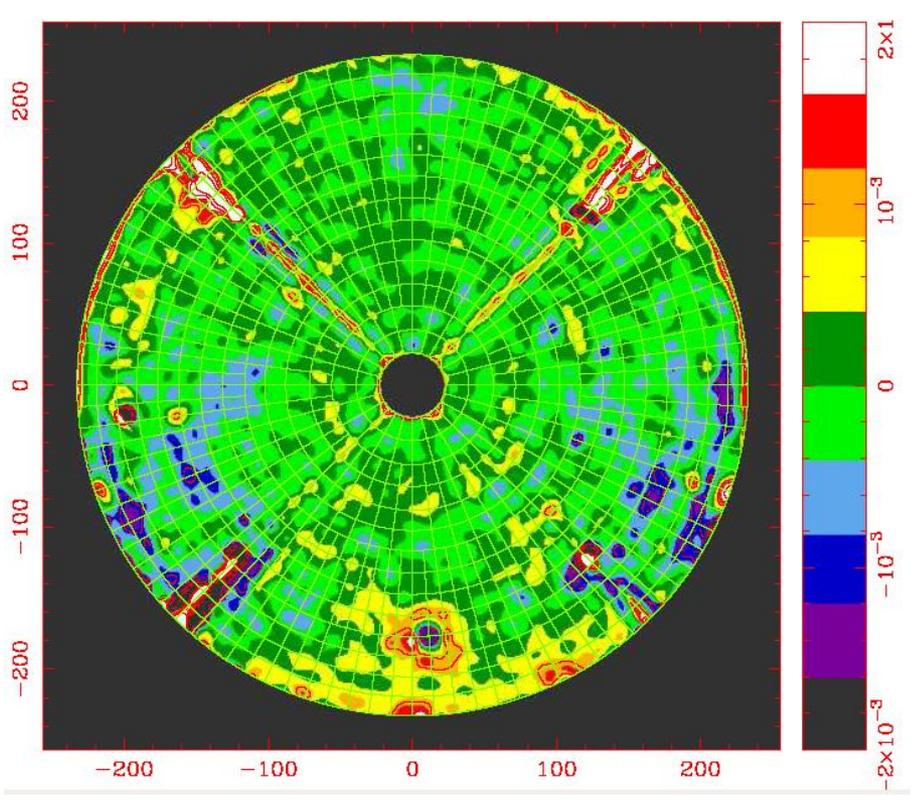

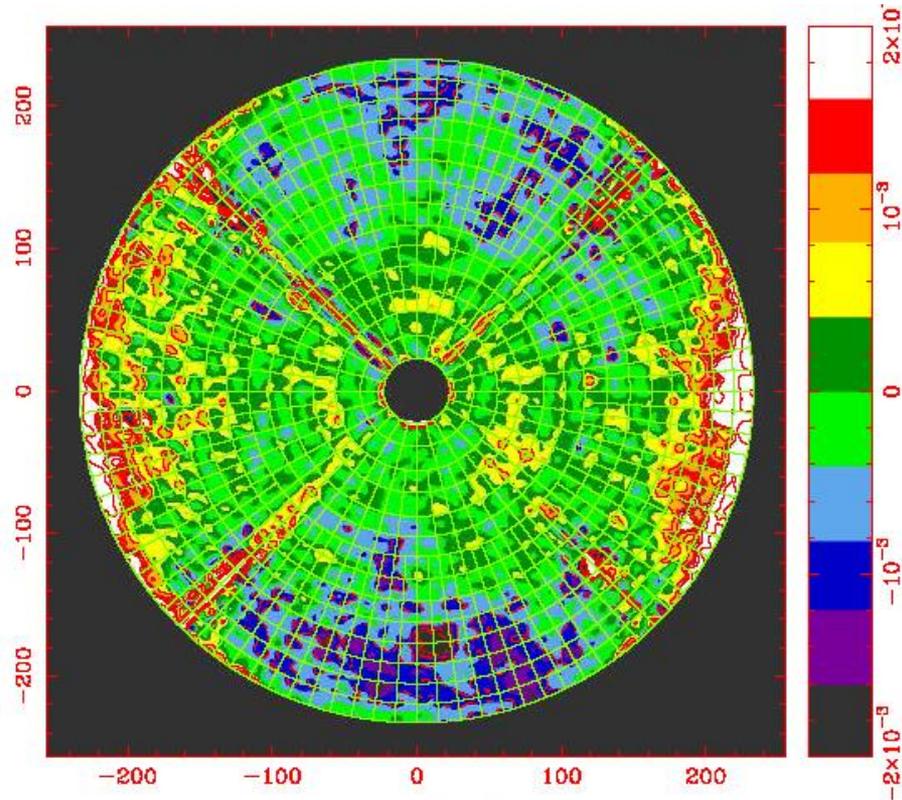

Tianma Telescope Q-Band Two-Pixel Farfield @ Spacing\_70 mm\_43 GHz

Tianma Telescope Q-Band Two-Pixel Farfield @ Spacing\_140 mm\_43 GHz

Items	Specifications
Frequency band	35-50 GHz
Number of beams	2
Receiver noise	<35 K
System noise	<60 K
Polarization	Dual circular

# Phase coherent holography on TM65m

Before adjustment

Test time: 2015-10-11 16:00-20:00(BT)

Scans:95

Aperture Resolution:1m

Surface error(RMS):0.58mm

After adjustment

Test time: 2015-10-21 4:10-6:18(BT)

Scans:65

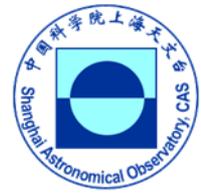

Aperture Resolution:1m

Surface error(RMS):0.32mm

CDAS1 (2010)

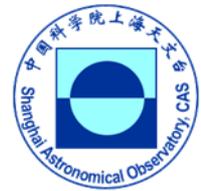

CDAS2 (2013)

CDAS3

CDAS:  
Chinese VLBI Data Acquisition System

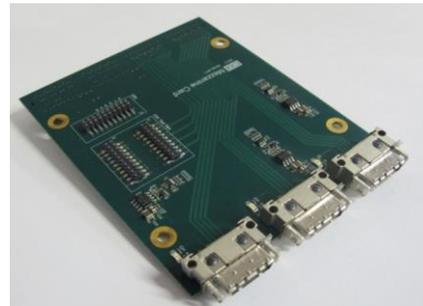

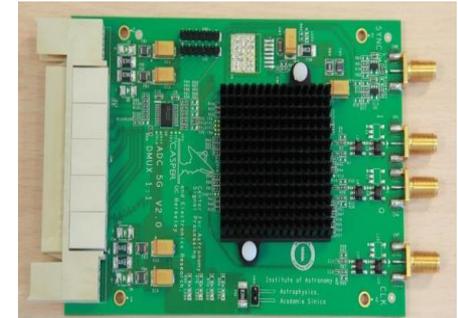

# Comparison

Platform	CDAS1	CDAS2	CDAS3
Number of inputs IFs for each board	1	2	4
Sample mode	1CH@1024Msps	2CH@2048Msps 1CH@1024Msps	4CH@1024Msps 2CH@2048Msps 1CH@4096Msps
Type of FPGAs	4 x Virtex4 LX160	2 x Kintex7 480T	1 x Kintex7 480T
Data Interface	VSI (interface board needed)	10GE x 2 VSI(interface board needed)	10GE x 6
Memory	No	No	8GB DDR3
DAC	No	No	Yes
Schedule	Finished	Firmware and software testing	2016 or later

# Future work: General purpose backend

- **VLBI (SHAO)**
  - 512MHz BW x 4 (depend on the resources in FPGA)
  - 16 channels with PFB algorithm
  - VDIF Data frame
  - 10GE output
- **For Pulsar (XAO)**
  - 2Gsps x 1 @ 8-bits
  - Minimum BW : <0.25KHz
  - PSRFITS supported
  - 10GE output
- **Platform**
  - Roach2 + GPU

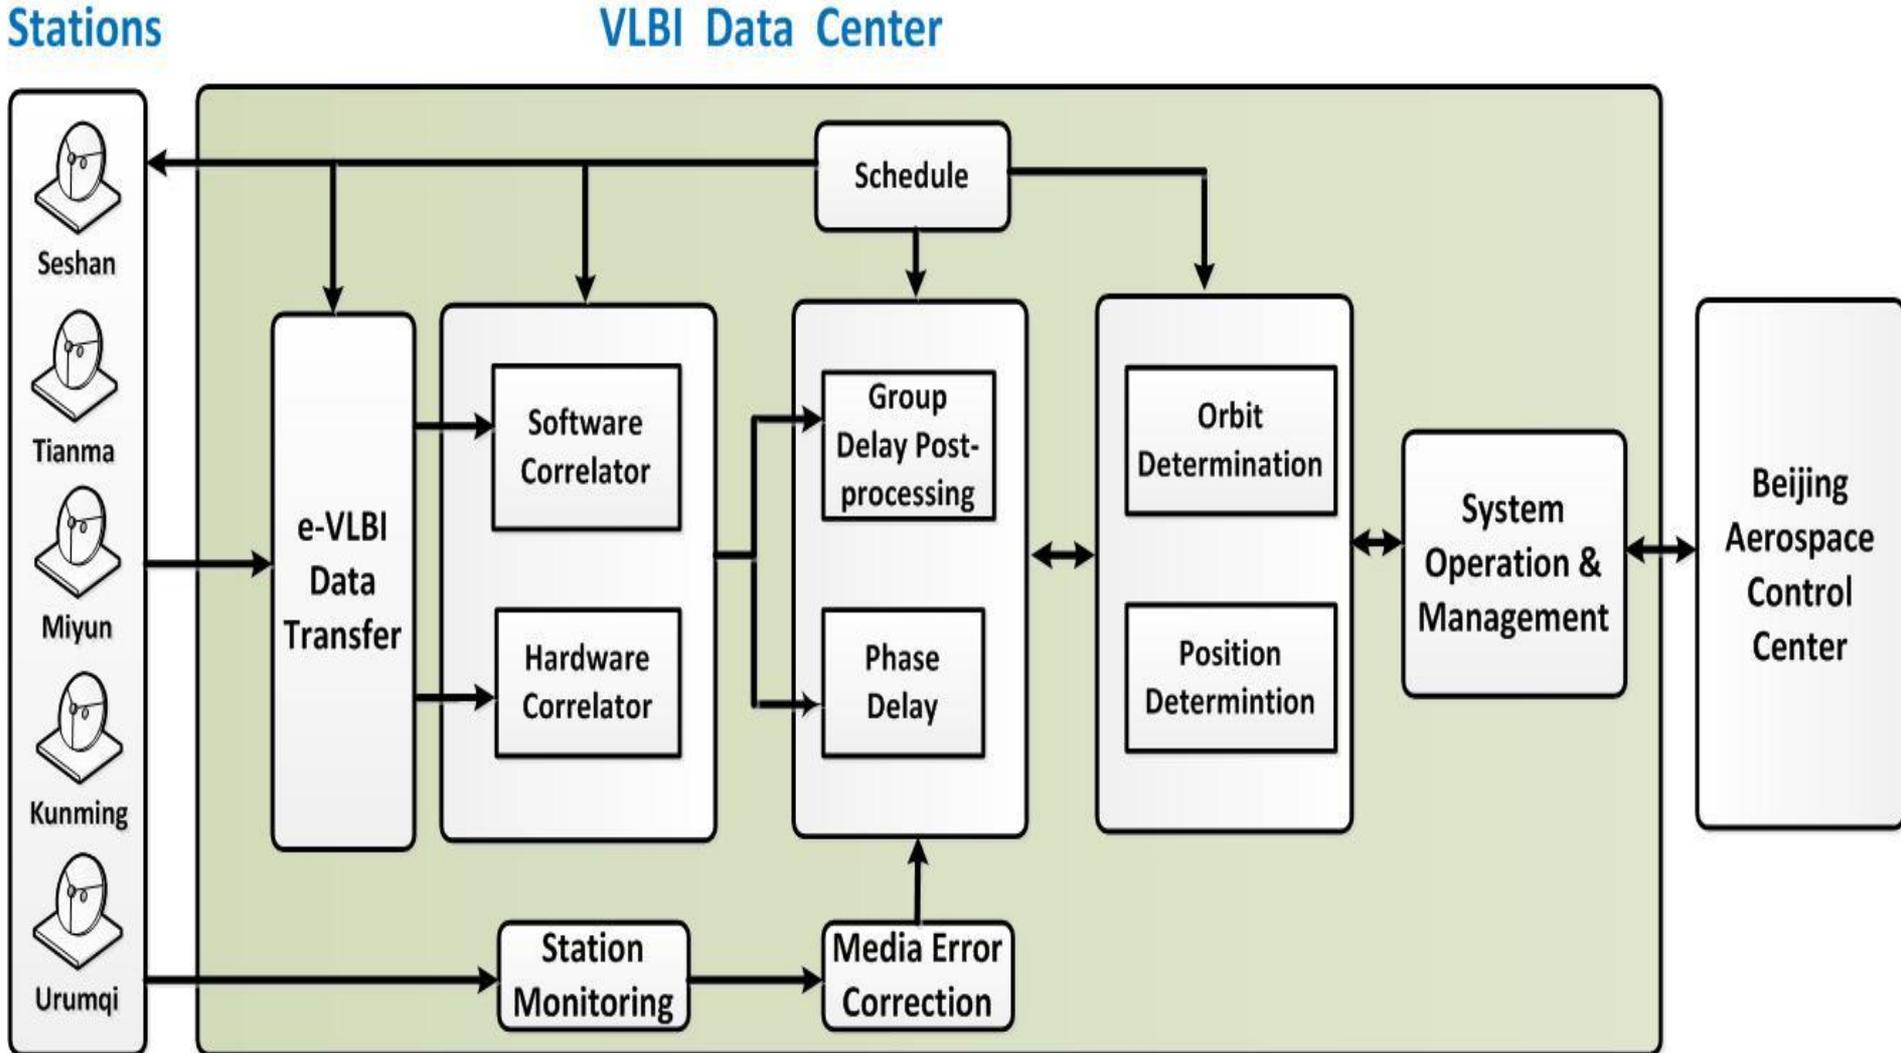

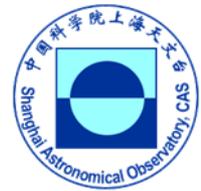

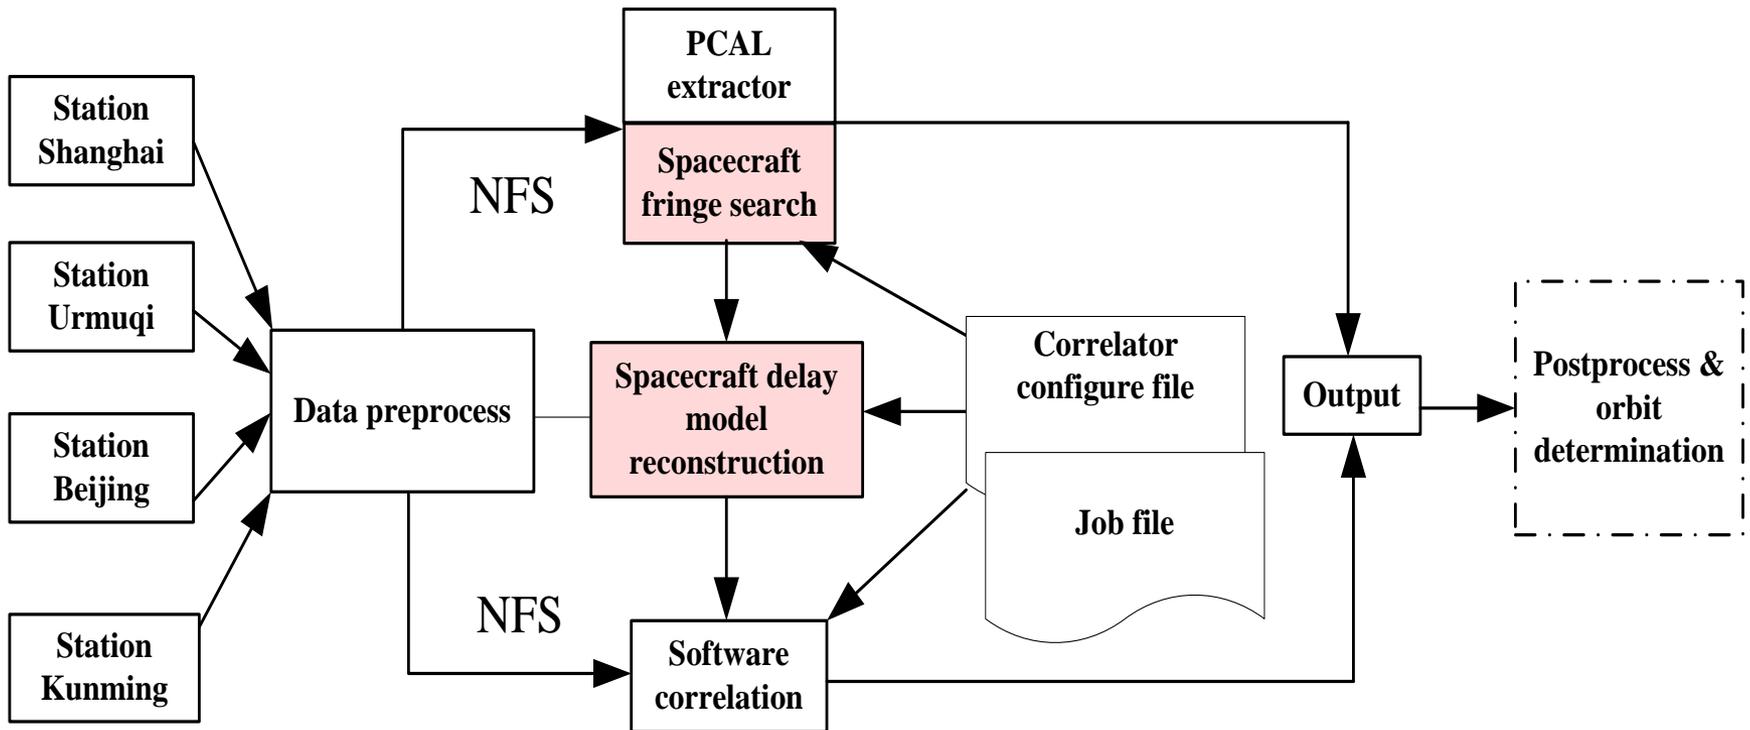

# CVN correlator status

- 1. Self-developed correlator:  
lunar mission & CVN geodesy observations**
- 2. DiFX was installed for IVS data processing ( > 2014)**

# CVN data center real-time pipelines in CE-3

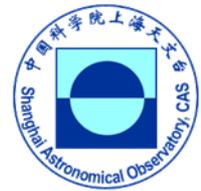

# Block diagram software correlator

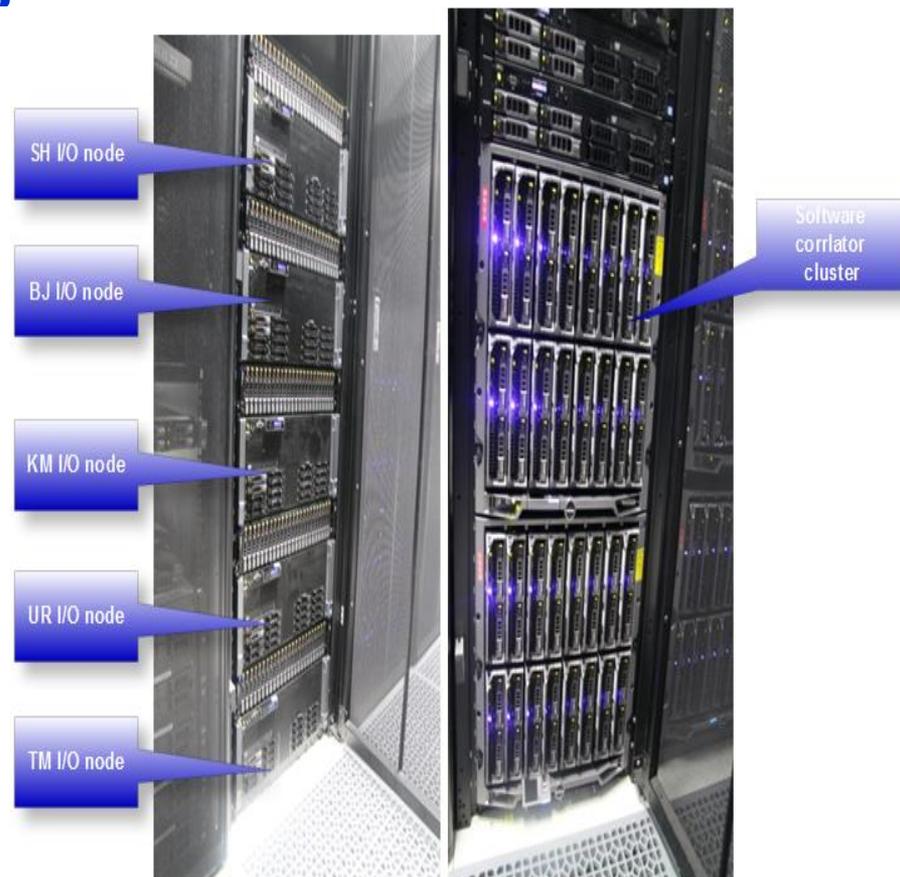

**NFS: Network File System**

# Computing platform

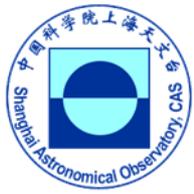

## Standard Linux cluster

- **Five I/O nodes**
  - E7-4820\*4/ 128GB/ 300GB+12TB
- **32 compute nodes\*12 cores:**
  - fringe search (192 cores)
  - + correlation (192 cores)
  - E5-2640\*2/ 32GB/ 300GB
- **2 manage nodes**
  - E5-2620\*2/ 24GB/ 900GB+214GB
- **Management network**
  - 10G Ethernet
- **Compute network**
  - InfiniBand

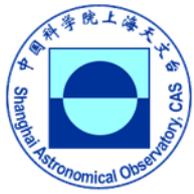

# Specifications of CE-3 software correlator

Processing Mode	Real-time & post-processing
Station number	1~20
Real-time fast fringe search	4 stations
IF number	1,2,4,8,16
Frequency channel	24~16384/IF
Integration period	0.1~60 second
Maximum data speed (192 CPU cores)	About 1.9Gbps/station, totally 4 stations
Output format	CVN, FITS-IDI

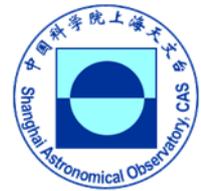

# Development status

---

- **Increase correlation speed by MPI+Pthreads**  
**6 stations \* 1.1Gbps/station->2.0Gbps/station**  
**192 CPU cores**
- **GPU acceleration: VGOS application**
- **Geodesy application: Output format CVN--> Mk4,**
- **Pulsar correlation: Pulsar gate**

# GPU acceleration correlator prototype

- **Two GPU Nodes**
- **Each node: 1 x Nvidia K40c**

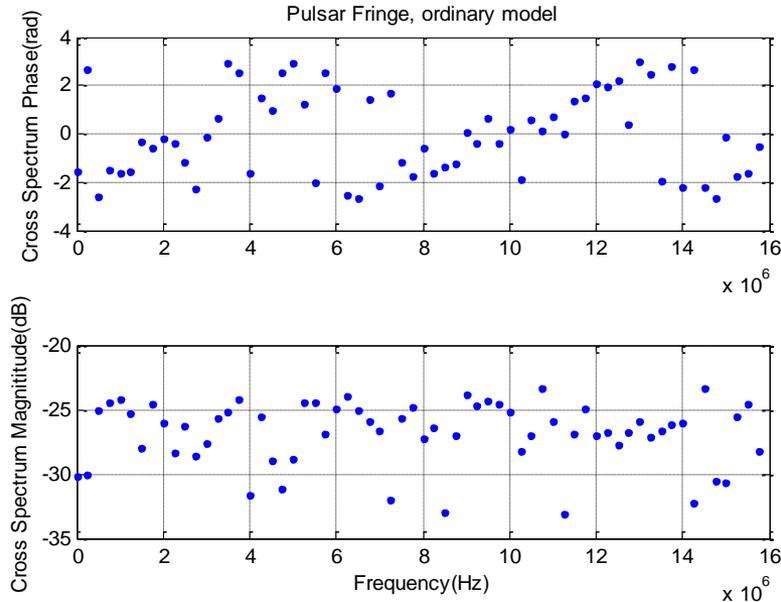

GPU	Speed/station
1 node	337Mbps
2 nodes	670Mbps

GPU Workstation	DELL T5600
Chipset	Intel C600
CPU	Intel E5-2600 @ 2.00GHz
Memory	64GB
Ethernet	Intel 82579 1Gb NIC
Infiniband	Mellonax ConnectX 40Gb/s QDR
GPU	NVIDIA Kepler K40c

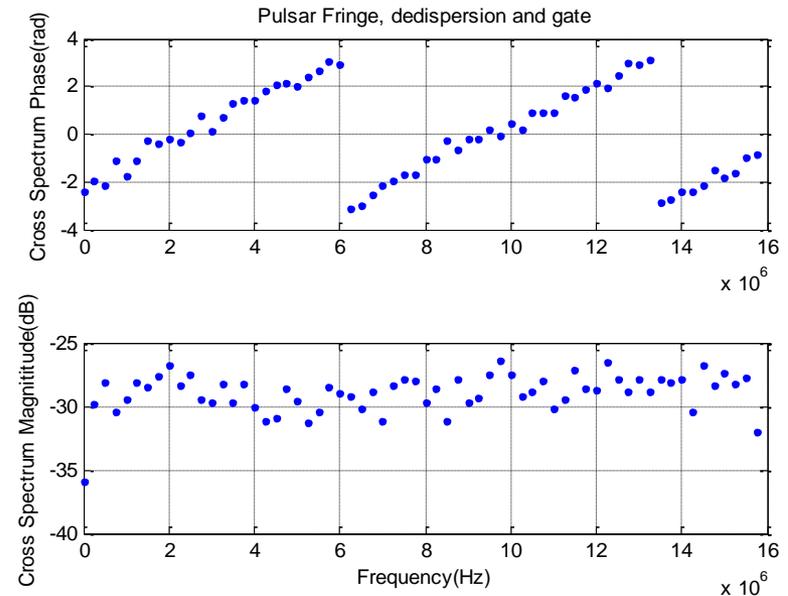

Four station speed test  
NVIDA K40C

# Pulsar B0329+54 preliminary result

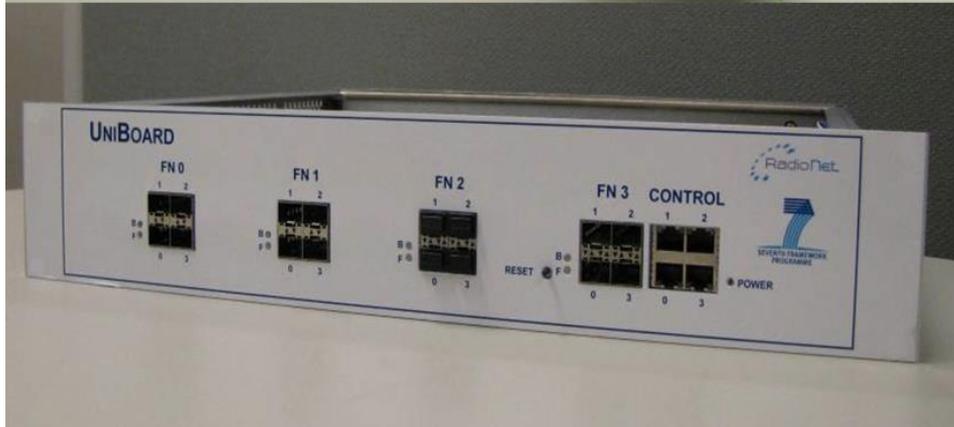

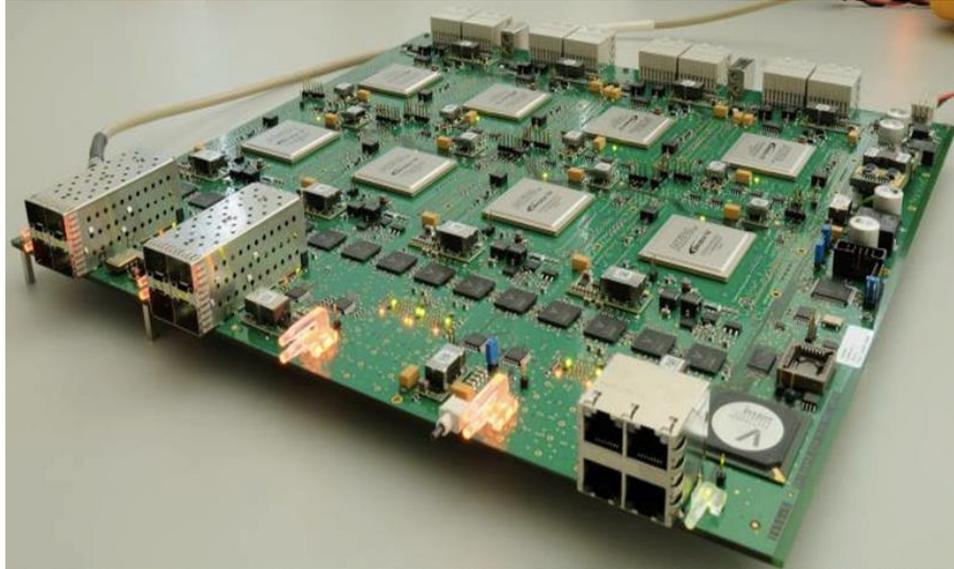

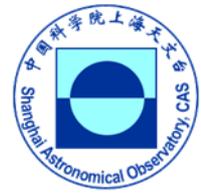

20s integration without  
pulsar gate and dispersion  
correction

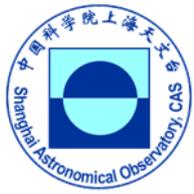

20s integration with  
pulsar gate and dispersion  
correction

# Hardware correlator: based on Uniboard

# Near Real-time Vs Real-time Mode

Mode	Near Real-time	Real-time
10GbE Interface	4Gbps	8Gbps
IO Interface	6.25Gbps	6.25Gbps
Delay Tolerate	~20s	1s
Buffering	Disk	Memory
Design Difficulty	10GbE, high speed IO	DDR3, system design
Applications	Deep space exploration	VGOS..

# Future work

---

## **CVN needs a general purpose correlator:**

- **Lunar and deep space exploration mission**
- **Geodesy and astronomy data processing**
- **Pulsar binning, multi-phase center ability**
- **VGOS broadband ability**

## **New correlator**

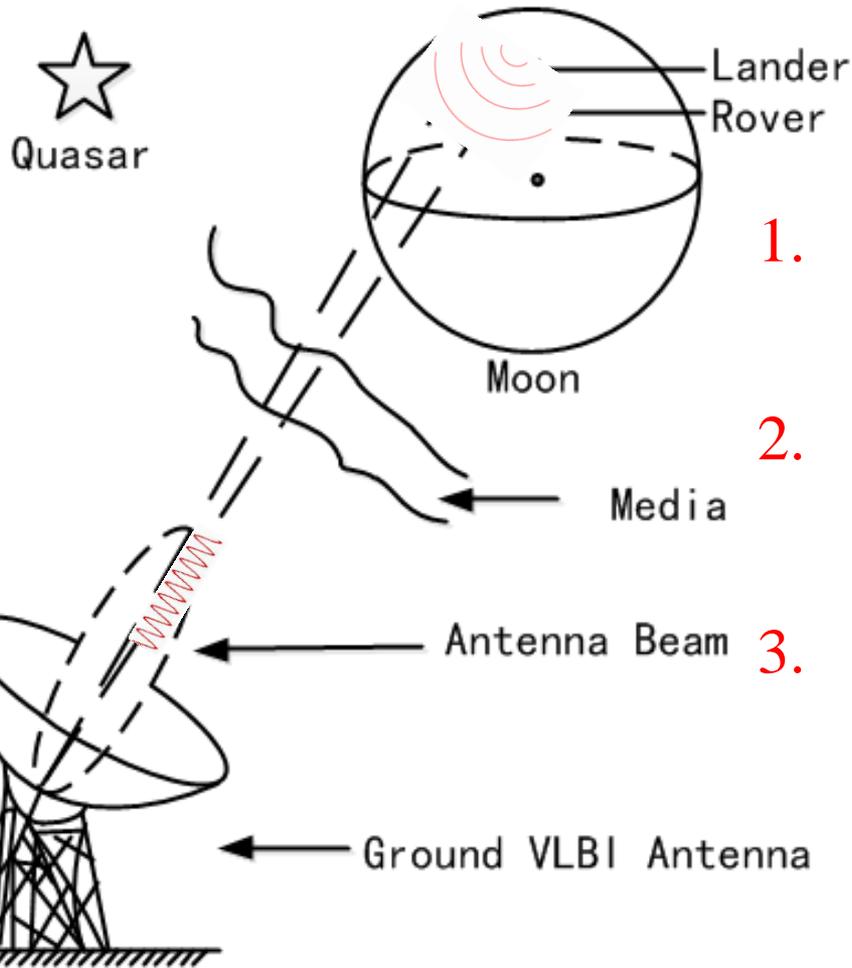

- **CVN, IVS(VGOS), EVAN, AOV**

# Outline

- Overview
- VLBI terminal & Correlator
- ▶▶▶ ■ Support the lunar missions
- VOGS antenna
- Space Millimeter VLBI Array

# Rover positioning by same-beam VLBI

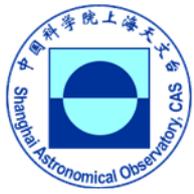

1. Differenced VLBI group delay  
Real time mode
2. Same beam phase reference image  
postprocess mode
3. Differenced VLBI phase delay,  
postprocess

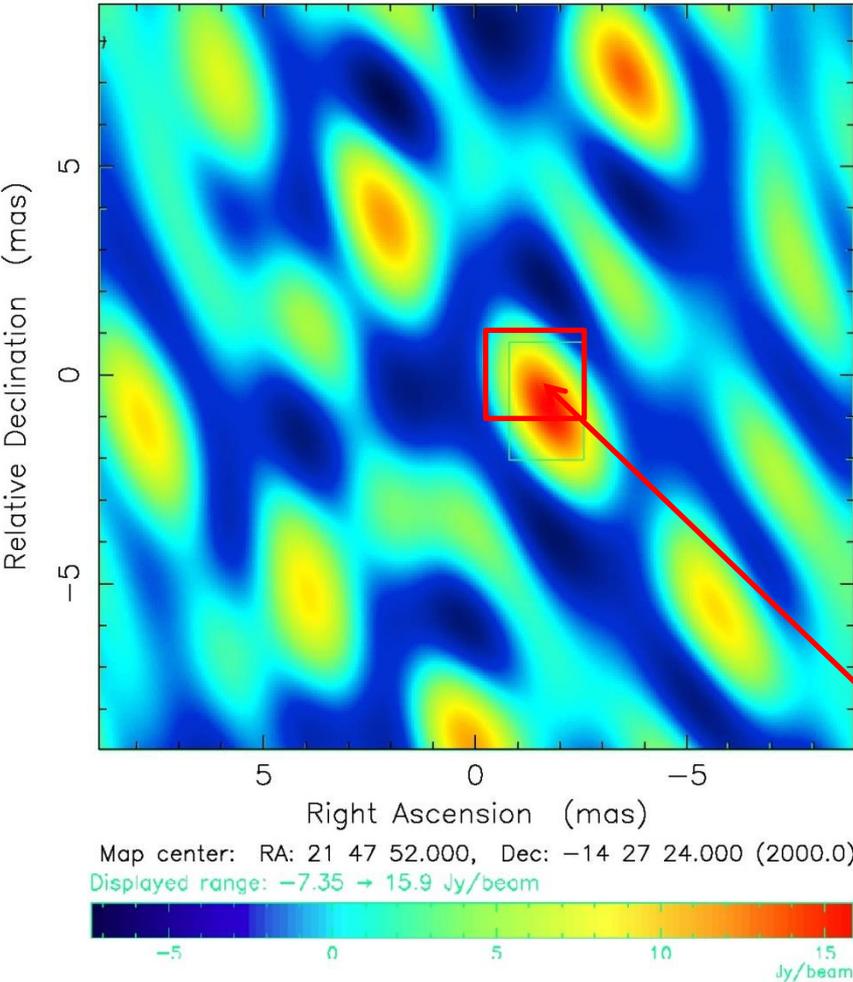

**□ Great improvement over CE-1/2**

	Chang'E 3		Chang'E 1/2	
	realization	requirement	realization	requirement
<b>ΔDOR technique</b>	yes	yes	no	no
<b>Same beam VLBI</b>	yes	yes	no	no
<b>Delay error</b>	0.5 ns	4 ns	6 ns	12 ns
<b>Lander position error</b>	< 100m	1000m	N/A	N/A
<b>YuTu relative position error</b>	~1 m	500m	N/A	N/A
<b>Data latency</b>	15-40 seconds	1 minute	6minutes	10 minutes

Help from Dr. Sergei Pogrebenko

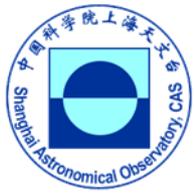

- ~ 1.5h observations
- ~2mas difference with ESA

Peak position

# Outline

- Overview
- VLBI terminal & Correlator
- Support the lunar missions
- ▶ ■ VOGS antenna
- Space Millimeter VLBI Array

# VGOS Station

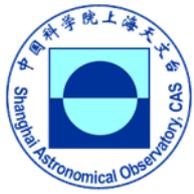

ShVGOS station located near Tianma 65m telescope

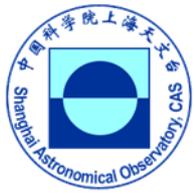

Seshan25 VLBI station location

# Antenna Construction

---

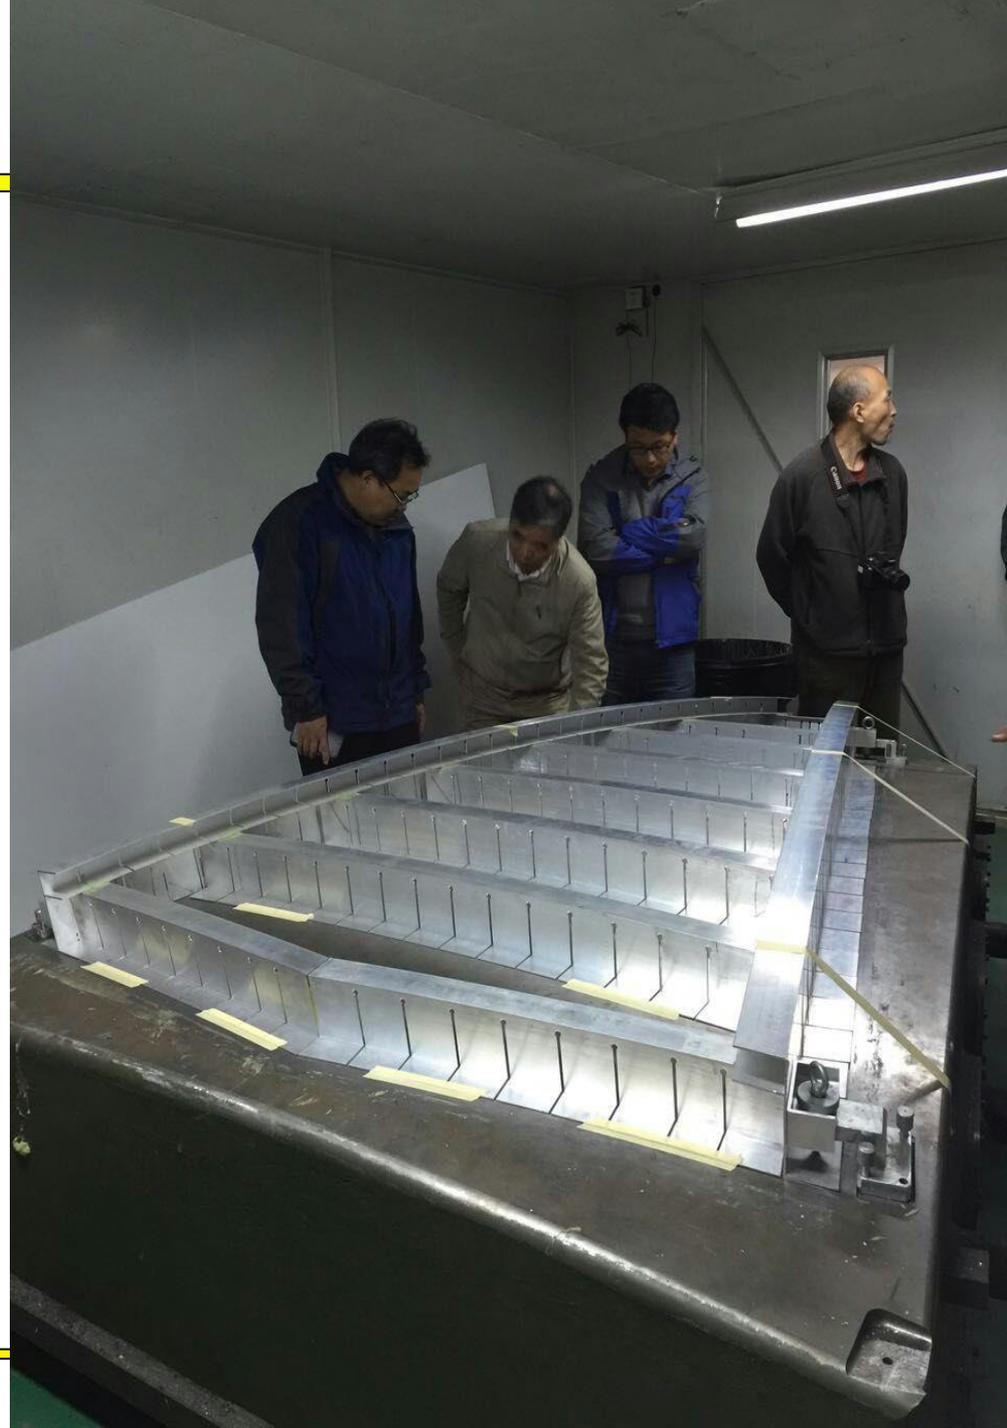

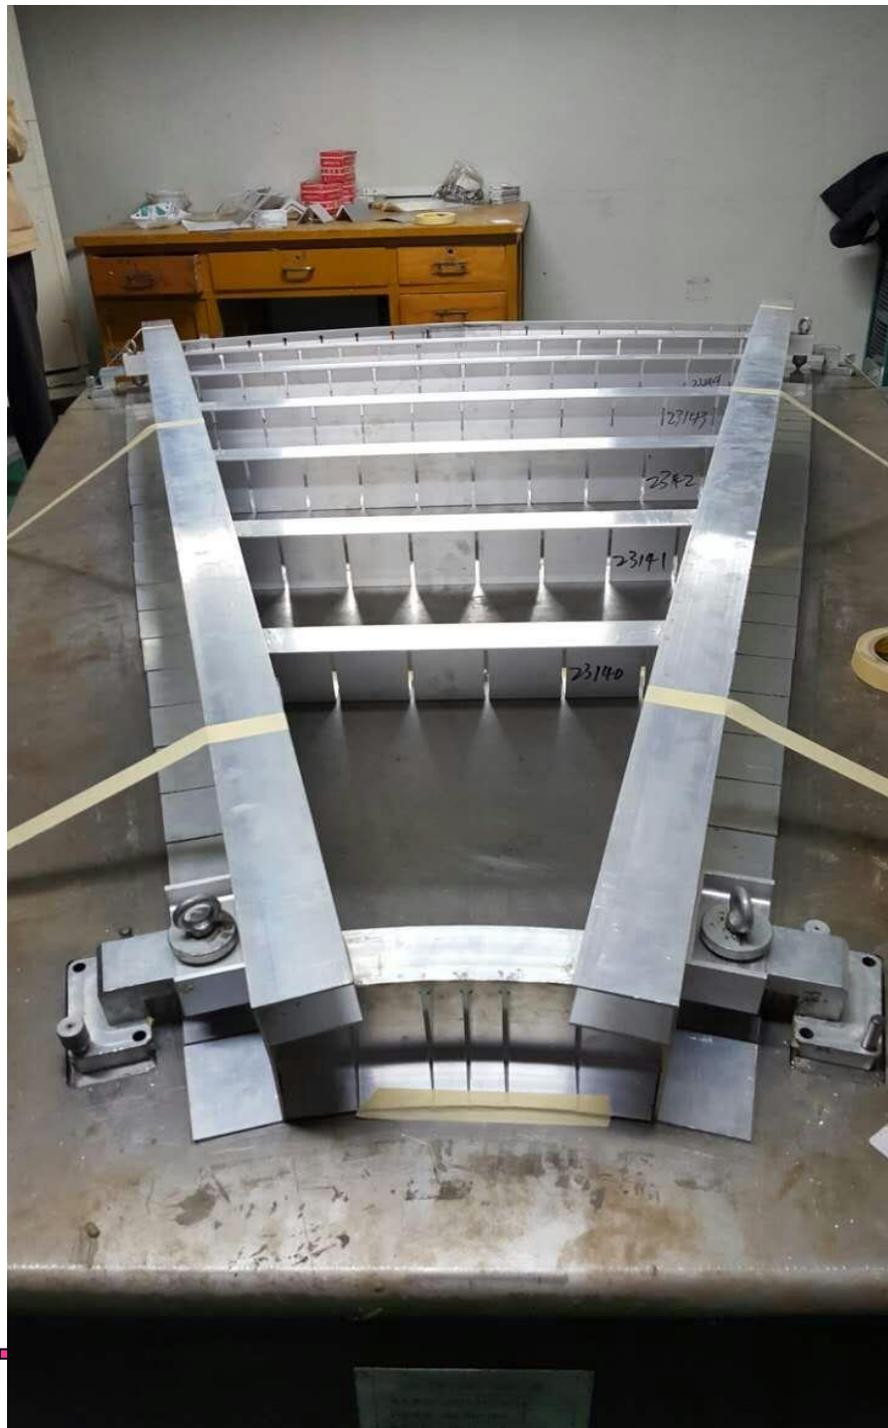

- The antenna is being constructed by a Chinese company CETC 54.
  - Similar design as Onsala VGOS station with some modifications considering geological difference.
  - 2016, Nov  
Join international observation experiments
-

# Main technical Specifications of Antenna

---

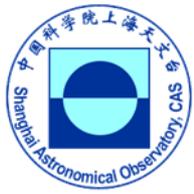

- Diameter: 13.2m
  - RF frequency range: 2.7-15.5GHz, upgradable to Ka band
  - Polarization: H&V Linear polarizations
  - Optics: Ring focus
  - Aperture efficiency: >50%
  - Surface accuracy: <0.3mm
  - Pointing accuracy: <18''
  - Antenna mount: az-el turntable mount
  - Slew rate: az 12°/s, 2.5°/s<sup>2</sup>; el 6°/s, 2.5°/s<sup>2</sup>
  - Slew range: az -270°~+270°; el 0°~90°
  - Reference point stability: <0.3mm
  - Signal path length stability: <0.3mm
-

# Space Millimeter VLBI Array (SMVA)

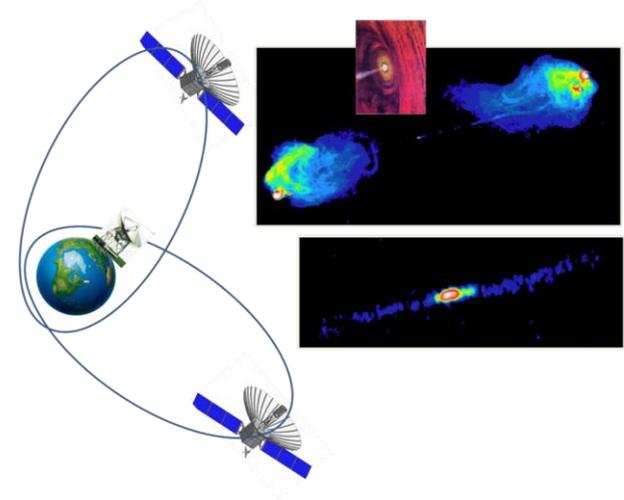

## ➤ Main Scientific Objectives:

- Black Hole Shadow (e.g. M87)
- Astrophysical Jet in Active Galactic Nuclei (AGN)
- Disk structure & dynamics, SMBH mass (water mega-masers)

## ➤ Specifications:

- Two 10-m (in diameter) antennas
- Three frequency bands (8, 22 & 43 GHz)
- Dual polarization (LCP/RCP)
- Angular resolution: 20 micro-arc-second
- Optimized orbits for a better (u,v) coverage
  - ✓ Apogee: 60,000 km
  - ✓ Perigee: 1,200 km
  - ✓ Inclination: 28.5°
- Life time: 3 year

## ➤ Background research project of CAS:

- Prototype research will complete 2015
