

A REANNZ Vision for Networked Science

T. Charles Yun
Computing for SKA Colloq
IRASR, AUT, Auckland, NZ
Fri 13 Feb 2015

Overview

- What is REANNZ; Who is Charles
- The REANNZ Network
- A Vision for Science and the Network
- Upcoming Events

About...

REANNZ

- In one sentence:
 - REANNZ is the computer network that connects the universities, CRI's and polytechs to one another and on to the rest of the world.
- In one paragraph:
 - REANNZ is **New Zealand's** R&E (research and education) network **connecting researchers** to their instruments, data and collaborators. We **help** drive the discoveries and inventions that are powering NZ's economy into the future. The REANNZ network is **designed for "big-data"**, as a result, everything else our members do over our network is **more efficient**. As a Crown-owned company and not-for-profit, REANNZ is charged with **exploring and supporting** the activities that help bring dreams closer to reality.

About...

Charles

- At REANNZ for just over a year
- Previously with JIVE (e-vlbi, radioastronomy) building the SKA pathfinder technologies
- Previous to that, with Internet2 working to embed the network as a primary tool in large-facility science communities
- Deeper into the past, a software consultant and mechanical engineer (automotive computer aided analysis) and caffeine entrepreneur

About...

A bit about our network

- 99.9+% uptime
- 40x increase in international capacity to AU and US
- 46% growth in traffic volume year-over-year
- ~4.5 Gbps commodity capacity purchased by members
- 2 Tbps national, optical capacity
- 100 Gbps ring around Auckland
- Resilient, “ladder-design” backbone connecting PoPs

...and a few different views of our network

- Shared Network
- 40 Gigabit Connectivity
- Tail Circuits
- Redundant Connectivity

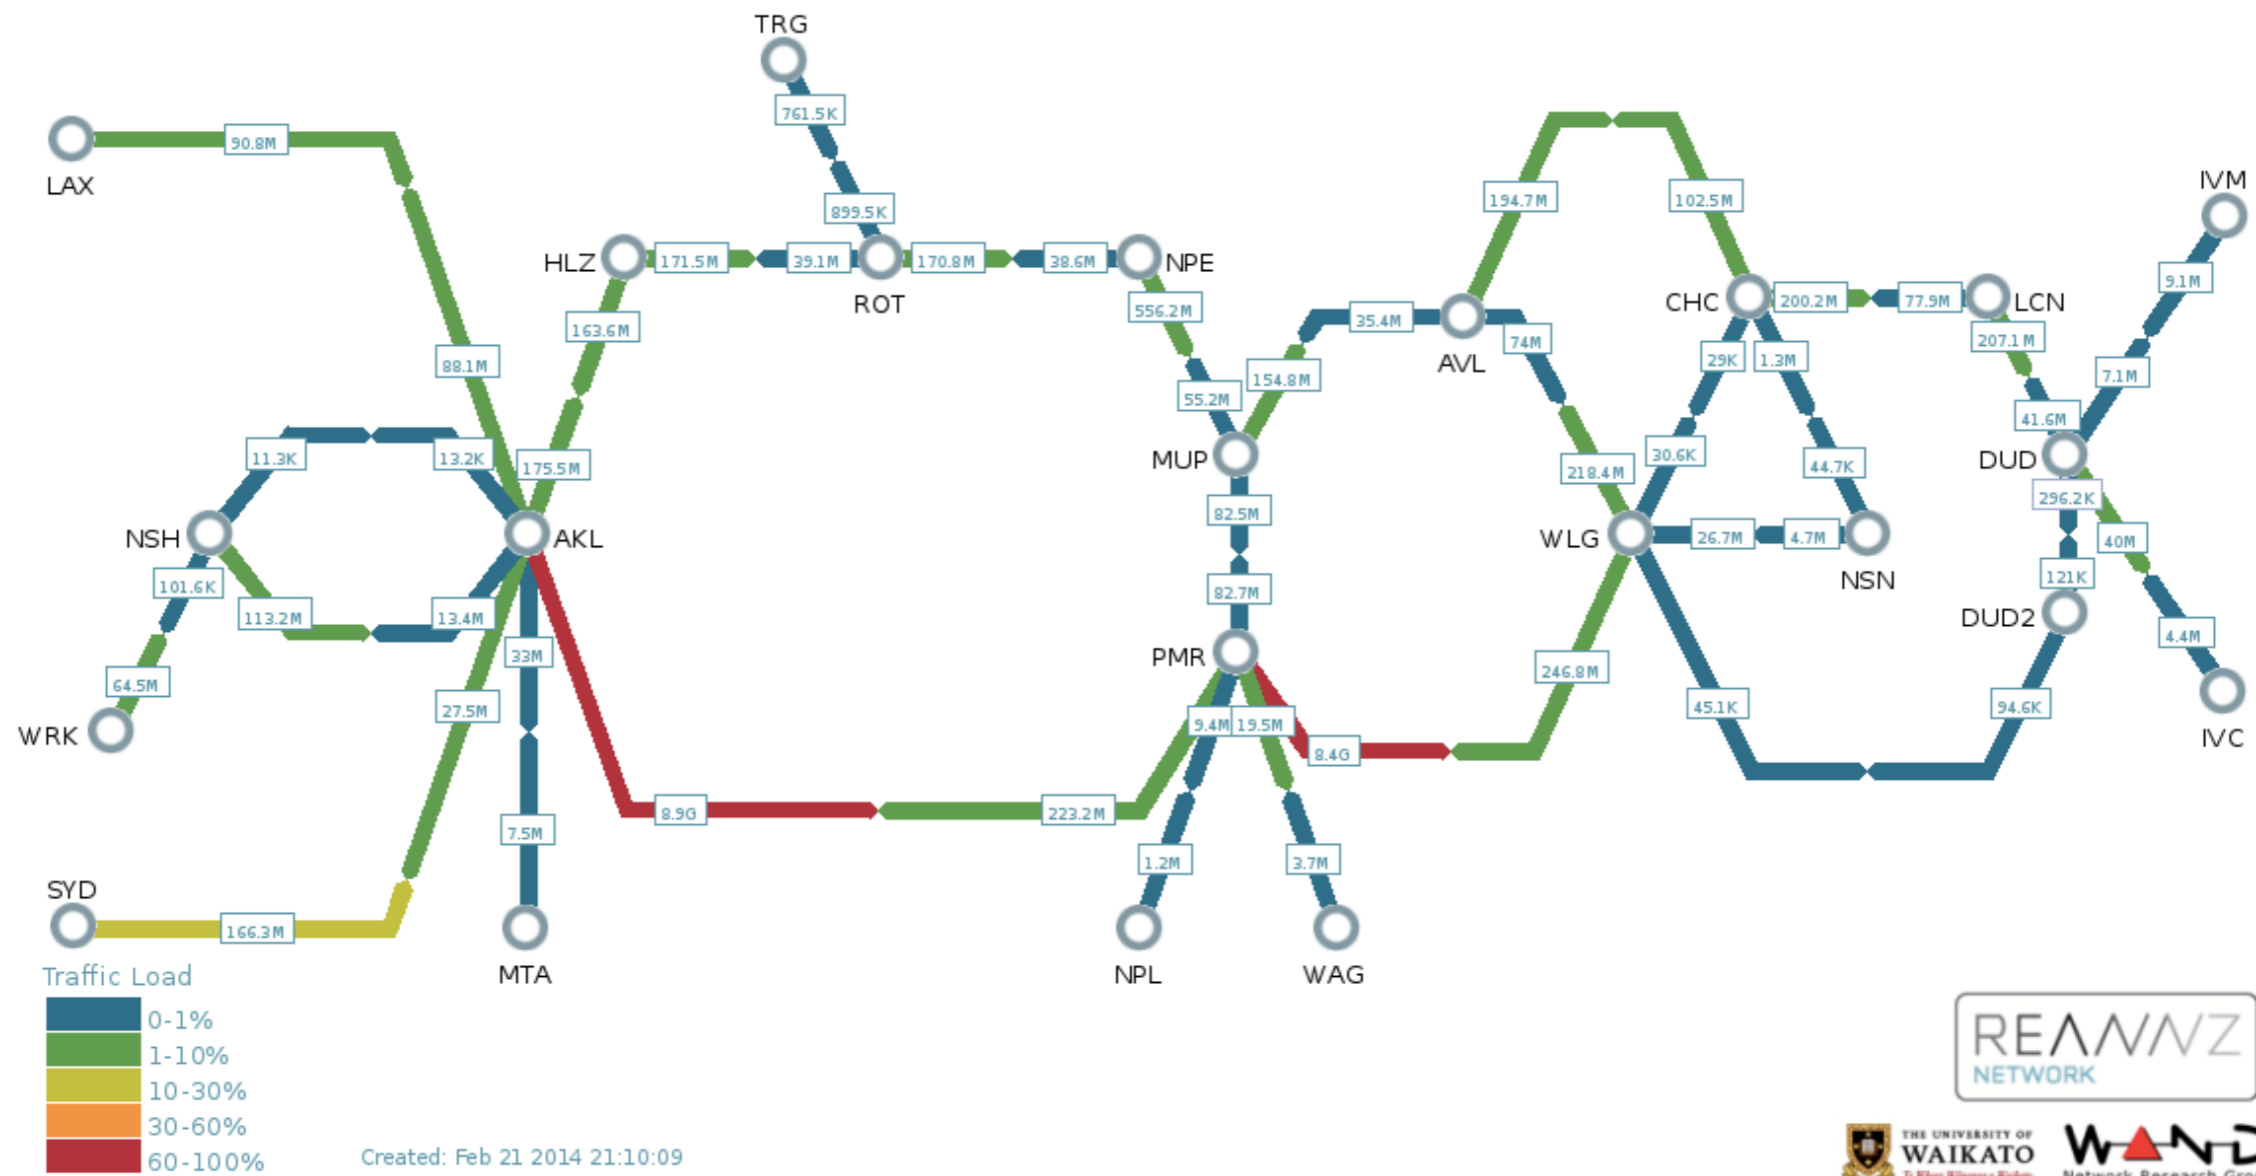

Pushing Bits

- We move data, bit-by-bit (get it! a networking joke!)
- PoPs: Points of Presence- located throughout the country, connected to the next-in-line PoP, dual connections for resiliency
- Members connect to PoPs
- The backbone is designed to balance capacity along one of the two sides (xref weathermap diagram next) and provide resiliency

Network- Overview

REANNZ Weathermap

International Capacity

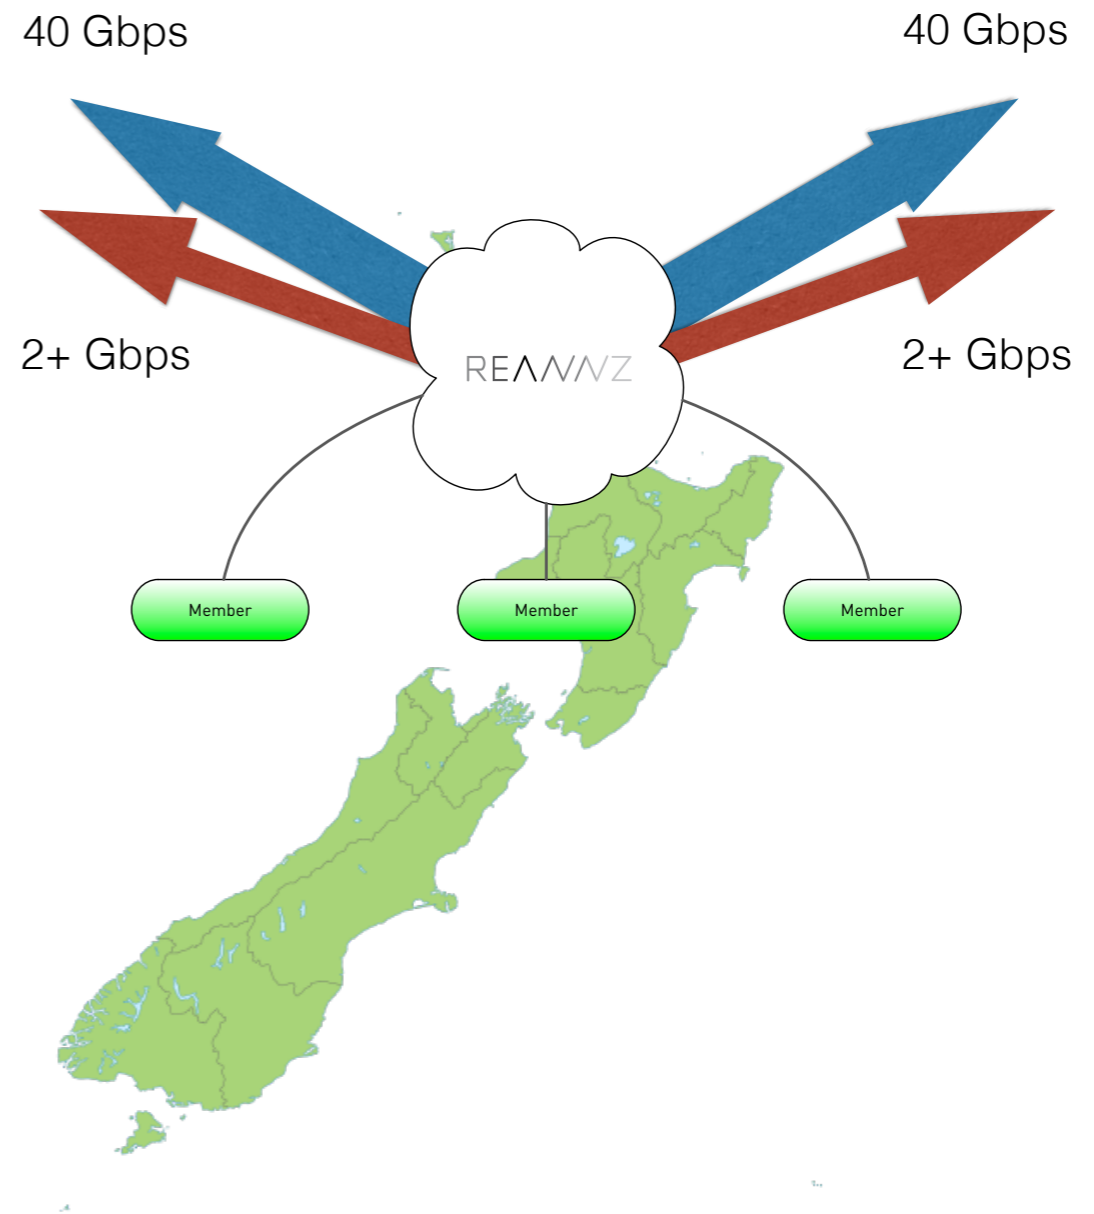

- REANNZ has 4+Gbps of commodity internet capacity (videos of cats)
- REANZ provides a dedicated 40 Gbps Science Wave supporting our R&E members research
- There are independent connections to Australia and the United States
- Specifically: Cooperation with other dishes and the ability to bring that data back to our NZ correlation pipeline

40 Gbps Science Wave

before Sept 2014

Now (hint 40+Gbps is better)

The network scales up science

- CERN learned how to run their science through a big network
- They helped build the world's networks
 - prediction, construction, testing and verification of science needs
- They run their local network
- ...and encouraged NRENs to step up, evolve and grow

A Vision for the Network

REANNZ: world class network

- REANNZ is running a top tier network
 - Best-in-class network statistics: reliability, capacity, up-time
- Partnering internationally
 - R&D, cloud services, test infrastructure
- Building the next generation tools
 - Some are directly related to SKA
 - ...some less so

A Vision for the Network

Visualisation Wall

- 8K, single-canvas visualisation display
- 2x2 matrix of 4K displays
- Running SAGE 1.3 and 2.0 (the middleware software infrastructure)
- Built by REANNZ, available to the entire community for testing and use
- First 8K device of this type in the world

A Vision for the Network

Software Defined Networking

- SDN- Software defined networking
- Separation fo control and data plane
- Centralised, programatic control of the network's operations and evolution
- NFV: network function virtualisation
- REANNZ is helping to write the underlying software that will run the future internet and we are testing it now

Network is part of the Instrument

- There is a similarity of the “all science is computer science” statement to “all new facilities are networking facilities”
 - Networking at the SKA site will be important (TN Chan’s 8 TB/s statistic)
- Networking challenges for SKA are legion
 - SDN of some flavour will play a part
 - The LAN, MAN and WAN require significant new thinking
- International networks need to think about how they interact with the SKA data set
 - Learn from the way CERN pushed the evolution of networks

Where can REANNZ assist?

- “...it is a data intensive environment” - Ensor
- REANNZ is able to support data-intensive science at a variety of levels
 - Movement of data: nationally, internationally
 - Systems design, planning and testing
 - Operational verification
 - SDN evolution

A Vision for the Network

the Network...

- is integral: it is no longer a byproduct but considered in the proposal stages as part of the data acquisition process.
- extends into the lab: it removes the tyranny of distance and enables collaboration thus increasing the sources of primary data.
- assumes collaboration: researcher, IT staff, department chair, VC Research, president must all cooperate with one another **and then** the rest of the community—this is how *NETWORKS* operate.
- enables: to be a university/department/researcher of global significance, you have to work with your international peers with the same class of tools. Increasingly, world-class research will be synonymous with world-class access.

A Vision for the Network

REANNZ's Vision

- We have built a world class network
- We are collaborating with the world's best networks and their engineers
- We provide researchers with enviable international capacity
- We are ready for your science

Questions

engagement@reannz.co.nz

@reannznews

Upcoming Events

SDN Workshop

- VUW SDN Workshop

18-19 Feb 2015

Railway Building, Wellington, NZ

[http://ecs.victoria.ac.nz/Events/SDNWorkshop?
redirectedfrom=Main.SDNWorkshop](http://ecs.victoria.ac.nz/Events/SDNWorkshop?redirectedfrom=Main.SDNWorkshop)

- REANNZ is sponsoring and providing several speakers.
- This is an “introduction” course, great if you are technical and understand networks, but do not know SDN.

Upcoming Events

eRNZ 2015

- eResearch New Zealand 2015
23-25 March 2015
Rydges Hotel, Queenstown, NZ
<http://ernz2015.eresearch.org.nz/>
- New co-hosting arrangement. Focusing on demonstrations and use of infrastructure.
- Call for proposals is open, submit a talk!
- ...I am on the program committee, I have to pitch it.
